22ND ANNUAL GLOBAL
INVESTMENT CONFERENCE

SEPTEMBER 14-16, 2020
VIRTUAL CONFERENCE

Disclaimer & Competent Person

This presentation is provided on the basis that the Company nor its representatives make any warranty (express or implied) as to the accuracy, reliability, relevance or completeness of the material contained in the Presentation and nothing contained in the Presentation is, or may be relied upon as, a promise, representation or warranty, whether as to the past or the future. The Company hereby excludes all warranties that can be excluded by law. The Presentation contains material which is predictive in nature and may be affected by inaccurate assumptions or by known and unknown risks and uncertainties, and may differ materially from results ultimately achieved.

The Presentation contains “forward-looking statements”. All statements other than those of historical facts included in the Presentation are forward-looking statements including estimates of resources, timing of permit and license amendments, and rates of uranium extraction and recovery. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, uranium price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any “forward-looking statement” to reflect events or circumstances after the date of the Presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. All persons should consider seeking appropriate professional advice in reviewing the Presentation and all other information with respect to the Company and evaluating the business, financial performance and operations of the Company. Neither the provision of the Presentation nor any information contained in the Presentation or subsequently communicated to any person in connection with the Presentation is, or should be taken as, constituting the giving of investment advice to any person.

This presentation shall not constitute an offer to sell or solicitation of an offer to buy securities of the Company, and the securities of the Company may not be offered or sold in any jurisdiction in which their offer or sale would be unlawful.

Please note that Production Targets within this presentation are based on a proportion of inferred resources. There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration work will result in the determination of indicated mineral resource or that the production target itself will be realised.

Competent Person Statement

The information in this presentation that relates to Exploration Results, Mineral Resources or Ore Reserves at the Lance Projects is based on information compiled by Mr Benjamin Schiffer. Mr Schiffer is a Registered Professional Member of the Society of Mining, Metallurgy and Exploration (Member ID #04170811). Mr Schiffer is a professional geologist employed by independent consultant WWC Engineering. Mr Schiffer has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking as a Competent Person as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’. Mr. Schiffer consents to the inclusion in the presentation of the matters based on his information in the form and context in which it appears.

This presentation was approved by the Managing Director/CEO

Cautionary & Inferred Resources Notice

The Feasibility Study completed for the Lance Projects includes measured and indicated resources and an assumed resource conversion of 60% (inferred to indicated or greater). The purpose of the Feasibility Study is to demonstrate the Lance Projects economic viability and the robustness of the planned low pH operations over an extended mine life beyond the existing Ross production area.

The Feasibility Study itself is based on various assumptions, including homogeneity of the delineated ore body contained within the Lance Projects. This is considered reasonable by the Company's technical consultants, competent persons and independent external consultants. The Company believes that it has a reasonable basis upon which to prepare and release these Feasibility Study results, particularly given that the Lance Projects have been in operation since December 2015. Whilst the Company considers that all the material assumptions underpinning the Feasibility Study are based on reasonable grounds, there is no certainty that they will prove to be correct or that the outcomes indicated by the Feasibility Study will be achieved.

The Company believes it has a reasonable basis for providing the forward-looking statements and production targets included in this announcement. The material assumptions are included in Appendix 1 of this announcement and in the JORC table disclosures appended. The detailed assumptions regarding the resources are outlined in the ASX announcement released on 14 November 2018.

Investors should also note that there is no certainty that the Company will be able to raise the amount of funding for the Lance Projects when it is required or on terms that are not overly dilutive or that are favourable to the value of the Company's existing shares.

This presentation has been prepared in accordance with the JORC Code (2012) and the ASX Listing Rules. There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration and delineation work will result in the determination of indicated mineral resources or that the production target itself will be realised. Financial information contained in this announcement is preliminary in nature and is in-part based on low-level technical and economic assessments and is insufficient to support the estimation of reserves or to provide assurance of economic development.

Under the Feasibility Study mine plan, the first 5 years production can be sourced almost entirely from Measured and Indicated Resources. If the Inferred Resources are excluded from the Feasibility Study, the economic analysis still forecasts a positive financial performance. Therefore, the Company is satisfied that the use of Inferred Resources is not a determining factor in overall Project viability and that it is reasonable to include Inferred Resources in the Feasibility Study, particularly given that the Lance Projects is an operating project that has been producing uranium for over two years.

In accordance with the relevant regulations governing the disclosure of mineral projects, readers are cautioned that mineable resources based on inferred resource material are considered too speculative geologically to enable them to be classified as reserves.

US - Focused Uranium Producer with Rapid Re-Start Potential

- Term debt-free and well-funded with over US\$10m in cash
- Direct access to the improving uranium market
- Low-capital pathway and rapid re-start potential following Final Investment Decision (FID) for Lance
- Applying a low pH extraction process to transition Lance into a significant, low-cost, long-life uranium operation
- Led by a highly experienced Board of Directors, with a broad mix of skills across investment banking, metallurgical and chemical engineering, nuclear fuels and corporate finance
- Established uranium contract book generating CY21 net cash margin of US\$6-8 million, backed with binding purchase agreement

Lance Uranium In-Situ Recovery (ISR) Project

Wyoming, USA

A Tier-One, Long-Life Operation

- 🌀 Lance is one of the largest US uranium projects in size and scale
 - 🌀 53.6M lbs U₃O₈ JORC (2012) compliant resource base¹
 - 🌀 Current market capitalisation reflects only a modest valuation of ~A\$1.12 per pound of resources
- 🌀 Lance is licensed to produce up to 3M lbs U₃O₈ per annum
 - 🌀 Current (Stage-1) plant capacity of 1.15M lbs U₃O₈ per annum
- 🌀 Modern processing and wellfield production facilities constructed in 2015 or later
- 🌀 Lance production is currently paused while the Project transitions to a low pH ISR
- 🌀 Estimated 6-month lead time to return to production (post FID)
- 🌀 Re-start decision depends on sustained improvement in market conditions and progression of current optimisation activities

¹ – See Appendix 1

Applying Industry-Leading Low pH Process

Historically US uranium ISR projects utilised alkaline extraction method

- Lance was originally licensed for alkaline ISR
- Laboratory testing in 2017 proved operational costs and production rates at Lance would significantly benefit from a low pH process

Low pH ISR is the leading method of global ISR uranium production

- 57% of global uranium mined in 2019 was extracted via low pH ISR
- Lowest quartile cash cost uranium mines are all low pH ISR
- **Lance is the only US-based uranium project authorised to use industry leading low pH ISR method**

September 2018 Low pH ISR Feasibility Study¹

- Low pH ISR transition CAPEX ~US\$6 million
- ~US\$15 million to construct Mine Unit 3 and ramp-up to Stage 1
- Stage 1 (production rate 1.15Mlbs p.a.) AISC of US\$41/lb
- Stage 2 (2.3Mlbs p.a.) CAPEX of US\$43 million & AISC of US\$31/lb

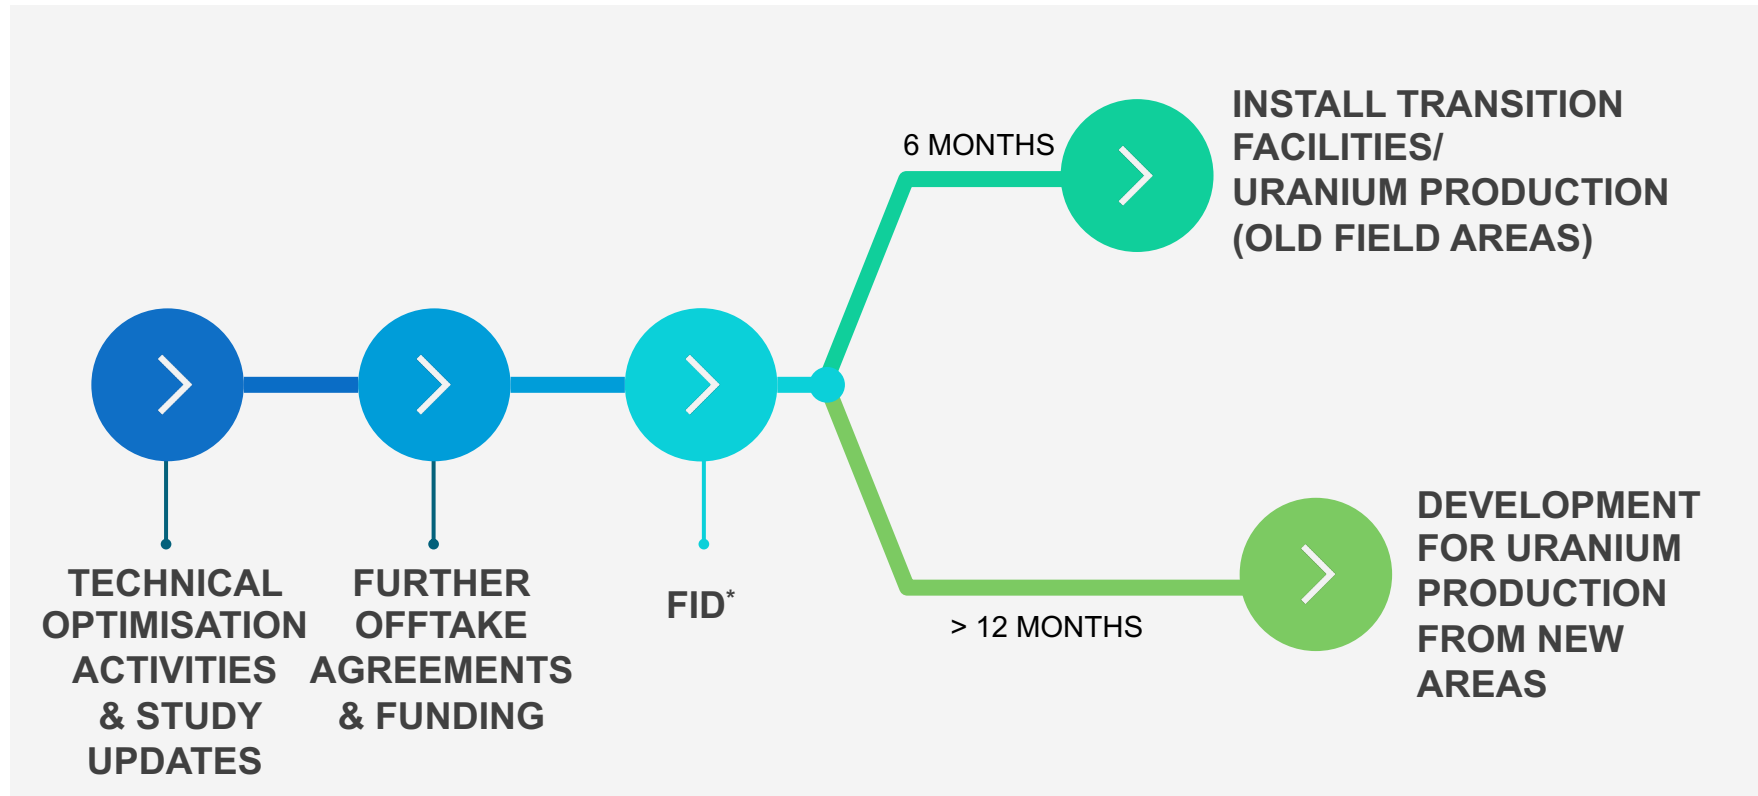

1) There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration and delineation work will result in the determination of indicated mineral resources or that the production target itself will be realised.

Technical Optimisation Activities

| Q2 '20 | Q3 '20 | Q4 '20 | Q1 '21 | Q2 '21 | Q3 '21 | Q4 '21 |
|--|---|--------|--------|--------|--------|--------|
| <ul style="list-style-type: none"> • Drill rig on-site to complete remaining wellfield activity required for new field demonstration • Further round of column leach tests | <div> <ul style="list-style-type: none"> • Further optimise low pH transition planning • New field demonstration commenced <ul style="list-style-type: none"> • Unmined area not subject to alkaline </div> <div> <ul style="list-style-type: none"> • Enhance future operations <ul style="list-style-type: none"> • Permit wellfield oxidant addition • Permit use of ponds for fines management </div> <div> <ul style="list-style-type: none"> • Low pH ion exchange resin selection • Additional optimisation test work </div> | | | | | |

A Well-Defined Pathway to Production

* Low pH implementation FID decision could be made concurrent to optimisation activities

- FID based on uranium market conditions
- FID also based on progression of optimisation activities and study updates

An Established Uranium Contract Book

Established and Proven Relationships

- 🌀 Sales Net Revenue of US\$6-8 million **secured** in CY21, through established uranium contract book
 - 🌀 Binding purchase agreement to procure 400,000 lbs U3O8
- 🌀 The only junior uranium producer with long-term sales contracts extending to 2030, representing ~20% of projected Lance FS LOM production
- 🌀 Current contracts in place for up to 5.5M lbs at US\$51-\$53 / lb U3O8 with major utilities across both the US and Europe
 - 🌀 75,000 lbs U3O8 of remaining deliveries in CY2020 to be met from contracted purchases at fixed purchase price of <US\$27/lb U3O8, to generate net cash margin of \$US1.3M
 - 🌀 450,000lbs to be delivered in each of CY2021 and CY2022
- 🌀 Strong existing relationships with preferred customers will act as a base for new business
- 🌀 Peninsula now debt-free, with no requirement to pursue previous monetisation strategy

A Dynamic Uranium Market

- 🌀 The COVID-19 Pandemic has resulted in an unprecedented upheaval in the global uranium market
- 🌀 Uranium demand has been quite resilient; however production disruptions have been significant;
 - 🌀 Global uranium leader Kazatomprom implemented major mine-site restrictions in April with production impacts projected beyond EOY-2020
 - 🌀 Cameco suspended Cigar Lake production in March with a restart planned for September
- 🌀 A renewed emphasis on supply diversity and security of supply is developing
- 🌀 **Uranium spot prices have risen ~27% to US\$30/lb since mid-March 2020**

Key US NFWG Report Findings

🔊 US DOE “Strategy to Restore American Nuclear Energy Leadership”

- 🔊 A comprehensive outline of potential actions designed to **revive the capabilities of the US uranium mining, milling and conversion industries**
 - 🔊 Strategy has strong bipartisan support

🔊 Key NFWG Policy Recommendations

- 🔊 Establish US Uranium Reserve with budget appropriation required of **US\$150 million per year, for 10 years** to purchase US produced uranium
 - 🔊 Propose purchasing 17 to 19Mlb over a 10-year period of US produced U3O8

🔊 What does the NFWG Report mean for Peninsula?

- 🔊 DOE support for a long-term buying program from US uranium mines
- 🔊 **Peninsula is the only ASX-listed uranium company that has the immediate ability to take advantage of this US government buying program**

Fully-Funded, Right-Team, Right Location

Company is term-debt free and fully funded to meet all ongoing low pH ISR optimisation activities into CY2022

Peninsula is led by a highly-experienced and proven team with outstanding technical, operational and uranium experience

Cash-flow generated by strong existing contract book

- Binding purchase agreement netting a cash margin of US\$6 million to US\$8 million in CY2021

Immediate focus of demonstrating process improvements and delivering long-term value at the low pH ISR Lance Project

Rapid production re-start potential – 6 months post FID

- If markets warrant, re-start FID decision can be made in parallel to optimisation activities

Direct exposure to NFWG and proposed US Government uranium purchase program

FURTHER INFORMATION

Wayne Heili Managing Director (307) 467-5995

| Lance Projects Resource Estimate as at 31 December 2018 | | | | |
|---|------------------|-------------|------------------|-------------|
| Classification | Tonnes (million) | U3O8(kg) | Grade (ppm U3O8) | U3O8(lbs) |
| Measured | 3.4 | 1.7 | 487 | 3.7 |
| Indicated | 11.1 | 5.5 | 495 | 12.1 |
| Inferred | 36.2 | 17.2 | 474 | 37.8 |
| Total | 50.7 | 24.4 | 479 | 53.6 |

1) JORC Table 1 included in an announcement to the ASX released on 14 November 2018: “Revised Lance Projects Resource Tables”. Peninsula confirms that it is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.
