

PENINSULA ENERGY'S ROSS AND KENDRICK AREAS LIFE OF MINE PLAN UPDATE

October 2023

Important Notice & Disclaimer

This Presentation contains summary information about the current activities of Peninsula Energy Limited (the “Company”) as at the date of this Presentation. The information in this Presentation is of a general nature and does not purport to be complete. This Presentation does not purport to contain all the information that an investor should consider when making an investment decision nor does it contain all the information which would be required in a disclosure document or prospectus prepared in accordance with the requirements of the Corporations Act 2001 (Cth). It should be read in conjunction with the Company's other periodic and continuous disclosure announcements lodged with the Australian Securities Exchange, which are available at <https://www2.asx.com.au/>. To the extent permitted by law, the Company, its representatives, affiliates, related bodies corporate, officers, employees, agents and advisers make no representation or warranty (express or implied) as to the currency, accuracy, reliability, relevance or completeness of the material contained in the Presentation and disclaim all responsibility and liability for the information (including, without limitation, liability for negligence). This Presentation is not intended to form the basis of any investment decision by a prospective investor, but simply to provide an overview to allow prospective investors to decide whether to carry out their own independent investigations and seek their own advice before making a decision whether to invest in the Company. In making an investment decision, investors must rely on their own examination of the Company including the merits and risks involved. Investors should consult with their professional advisers – whether scientific, business, financial, tax or legal.

Past performance information given in this Presentation is given for illustrative purposes only and should not be relied upon as (and is not) an indication of future performance.

The Presentation contains “forward-looking statements”. All statements other than those of historical facts included in the Presentation are forward-looking statements including statements regarding the timetable and outcome of the offer, the results of the 2022 Definitive Feasibility Study and 2023 Revised Life of Mine plan, statements regarding the Company's ability to fund its operations, exploration and production targets, estimates of resources, timing of permit and license amendments, timing of uranium production, and rates of uranium extraction and recovery. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, uranium price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any “forward-looking statement” to reflect events or circumstances after the date of the Presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable laws or regulations (including the ASX Listing Rules). All persons should consider seeking appropriate professional advice in reviewing the Presentation and all other information with respect to the Company and evaluating the business, financial performance and operations of the Company. Neither the provision of the Presentation nor any information contained in the Presentation or subsequently communicated to any person in connection with the Presentation is, or should be taken as, constituting the giving of investment advice to any person.

The Company believes it has a reasonable basis for providing the forward-looking statements and production targets included in this announcement. The material assumptions and JORC disclosures are included in the appendices to the 2022 Definitive Feasibility Study announcement on 15 August 2022 and the 2023 Revised Life of Mine plan announcement on 31 August 2023. The detailed assumptions regarding the JORC resources are outlined in the ASX announcement released on 14 November 2018.

This Presentation is for information purposes only and is not a prospectus, disclosure document, product disclosure document, product disclosure statement or other offering document under Australian law or any law (and will not be lodged with the Australian Securities and Investments Commission). This Presentation is not and should be considered an offer to sell or solicitation of an offer to buy securities of the Company, and the securities of the Company may not be offered or sold in any jurisdiction in which their offer or sale would be unlawful.

Please note that Production Targets within this Presentation are based on a proportion of inferred resources. There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration work will result in the determination of indicated mineral resource or that the production target itself will be realised.

Disclaimer & Competent Person

The distribution of this Presentation in jurisdictions outside Australia may be restricted by law and any such restrictions should be observed. In particular, this Presentation may not be distributed or released in the United States. Any failure to comply with such restrictions may constitute a violation of applicable securities laws.

This Presentation does not constitute an offer to sell, or a solicitation of an offer to buy, any securities in the United States of America or in any other jurisdiction in which such an offer would be illegal. The securities referred to in this Presentation have not been, and will not be, registered under the U.S. Securities Act of 1933 ("Securities Act") or the securities laws of any state or other jurisdiction of the United States of America and may not be offered or sold, in the United States of America unless the securities have been registered under the Securities Act (which Peninsula has no obligation to do or procure) or are offered and sold in a transaction exempt from, or not subject to, the registration requirements of the Securities Act and any other applicable securities laws.

Non-IFRS financial information

Investors should also be aware that certain financial data included in this Presentation are "non-IFRS financial information" under ASIC Regulatory Guide 230: "Disclosing non-IFRS financial information" published by the Australian Securities and Investments Commission and also "non-GAAP financial measures" under Regulation G of the U.S. Securities Exchange Act of 1934. Non-GAAP financial measures in this Presentation include All in Sustaining Cash Cost, All in Cost and Net Cash Margin. The disclosure of such non-GAAP financial measures in the manner included in the Presentation may not be permissible in a registration statement under the Securities Act. These non-GAAP financial measures do not have a standardized meaning prescribed by Australian Accounting Standards and International Financial Reporting Standards ("IFRS"), and therefore may not be comparable to similarly titled measures presented by other entities and should not be construed as an alternative to other financial measures determined in accordance with Australian Accounting Standards or IFRS. Although the Company believes these non-GAAP financial measures provide useful information to users in measuring the financial performance and condition of its business, investors are cautioned not to place undue reliance on any non-IFRS financial information/non-GAAP financial measures included in this Presentation.

Competent Person Statement

Only the information in this Presentation that specifically relates to Exploration Targets, Exploration Results, Exploration Potential, Mineral Resources or Ore Reserves at the Lance Projects is based on information compiled by Mr Benjamin Schiffer. Mr Schiffer is a Registered Professional Member of the Society of Mining, Metallurgy and Exploration (Member ID #04170811). Mr Schiffer is a professional geologist employed by independent consultant Western Water Consultants, Inc. d/b/a WWC Engineering. Mr Schiffer has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Schiffer consents to the inclusion in the Presentation of the matters based on his information in the form and context in which it appears.

This Presentation was approved by the Board of Peninsula Energy Limited.

Unless stated otherwise, all dollar values are references to US dollar throughout the slide deck

Cautionary & Inferred Resources Notice

The August 2023 Life of Mine plan (LoM) completed for the Ross and Kendrick Production Areas within the Lance Projects includes Measured and Indicated resources, and based on historical experience at Lance, utilizes a resource conversion factor of 60% to convert Ross and Kendrick Area Inferred resources to Indicated or greater quality for use in this revised LoM.

The revised LoM itself is based on various material assumptions as noted in Appendix 1. This includes the homogeneity of the delineated ore body contained within the Lance Projects which is considered reasonable by the Company's technical consultants, competent persons and independent external consultants when preparing the 2022 Definitive Feasibility Study. The Company believes that it has a reasonable basis upon which to prepare and release these revised LoM results, particularly given that the Ross Production Area was first placed into production in December 2015. Whilst the Company considers that all material assumptions underpinning the LoM are based on reasonable grounds, there is no certainty that they will prove to be correct or that the outcomes indicated by the revised LoM will be achieved.

The Company believes it has a reasonable basis for providing the forward-looking statements and production targets included in this announcement. Detailed assumptions regarding the included resources are outlined in the ASX announcement released 14 November 2018 and the Company confirms that there have been no material changes to the determination of the resources since this date. The production target in this announcement is underpinned by measured and indicated resources (comprising 70% of the production target) and inferred resources (comprising 30% of the production target).

Investors should also note that there is no certainty that the Company will be able to raise the amount of funding for the Lance Projects when it is required or on terms that are not overly dilutive or that are favorable to the value of the Company's existing shares.

This announcement has been prepared in accordance with the JORC Code (2012) and the ASX Listing Rules. There is a low level of geological confidence associated with Inferred mineral resources and there is no certainty that further exploration and delineation work will result in the determination of Indicated mineral resources or that the production target itself will be realized. Financial information contained in this announcement is preliminary in nature and is in-part based on low-level technical and economic assessments and is insufficient to support the estimation of reserves or to provide assurance of economic development.

Under the revised LoM plan, the first five (5) years production can be majority sourced from Measured and Indicated Resources. If the Inferred Resources are excluded from the revised LoM, the economic analysis still forecasts a positive financial performance. Therefore, the Company is satisfied that the use of Inferred Resources is not a determining factor in overall Project viability, and it is reasonable to include Inferred Resources in the revised LoM, particularly given that the Lance Projects have previously been an operating entity that produced uranium for almost seven years.

In accordance with the relevant regulations governing the disclosure of mineral projects, readers are cautioned that mineable resources based on Inferred Resource material are considered too speculative geologically to enable them to be classified as reserves.

Given the uncertainties involved, investors should not make any investment decision based solely on the results of the revised LoM.

Rounding

Totals in tables may not add due to rounding.

A COMPELLING URANIUM PROPOSITION

Independent, Long-Term Uranium Production

Flagship Lance ISR Project

One of the largest US uranium projects, with a JORC (2012) Resource of 53.7Mlbs¹ U₃O₈

Growing Lance in Size and Scale

Resource growth potential through further exploration and development drilling at Kendrick and Barber areas

A Robust Production Plan

Detailed and resilient Life of Mine (LoM) plan developed for Ross and Kendrick production areas, with operations to start in late 2024

Expanded Production Profile

2Mlb per annum capacity, end-to-end production of dry yellowcake, no longer relying on third-party processing

Early Positive Cash Flow

Sustainable monthly positive cash flow generated in year-one of production (2025)

Proven Team

Highly experienced uranium technical, development, and operational team

Developing Lance at an Opportune Time

Nuclear power gaining momentum as a critical part of the green energy mix

- Growing global recognition of the important role nuclear power will play in meeting decarbonization targets
- Nuclear energy provides high capacity-factor, carbon free, baseload electricity
- Energy security concerns have resulted in greater appreciation of nuclear globally
- Small Modular Reactor development rapidly advancing

Uranium and nuclear energy in the US

- Bills advancing in US House and Senate to support transition away from Russian nuclear fuel supply
- Nuclear power provides 52% of America's clean energy
- The US is the world's largest uranium consumer

US wants to significantly increase domestic production

- Most recent US domestic uranium production report by the Department of Energy showed minimal domestic production
 - U₃O₈ production in JunQ'23 only totaled 7,443lb, all from Wyoming
- If the US Government wants to improve energy security, it needs developments like Lance
- PEN completed delivery of 300,000 pounds of yellowcake to the US Strategic Uranium Reserve in Q1 CY 2023

Uranium Price Continues to Strengthen

- Supply/demand imbalance remains
- Robust growth forecasts for uranium demand due to the critical requirement of nuclear energy in meeting global decarbonization targets
- The reported uranium spot price closed at **\$73.50** at end of September 2023, a post-Fukushima high.
- Once in operation in late 2024, PEN will be well-placed to benefit from growing demand levels for uranium and strong pricing

Sustainability Focus

Peninsula's Annual Sustainability Report is built around the pillars of Employees, Environment, Social and Governance ("EESG")

- **2023 Report Sustainability highlights:**
 - Recipient of Wyoming Governors Safety Award (2 consecutive years), reflective of our commitment to Safety
 - Certification of ISO 14001 & ISO 9001 processes for environmental and quality management at Lance
 - Extensive environmental impact assessment completed for Kendrick Project Area

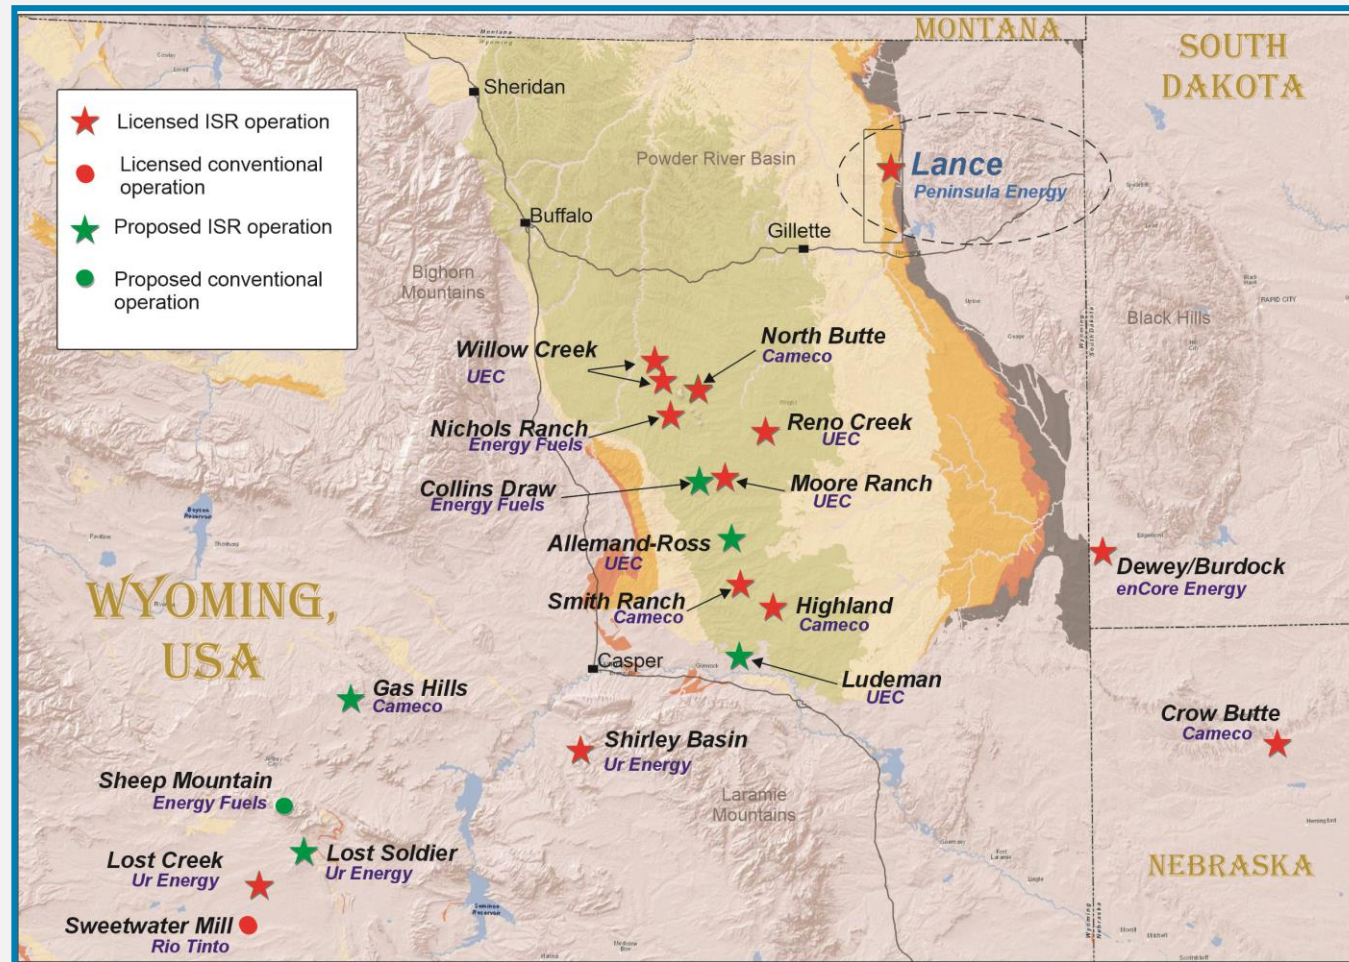

"The Sustainability Report represents a significant step towards ensuring the Company is accountable to all stakeholders"

2023 SUSTAINABILITY REPORT

PENINSULA
ENERGY LIMITED

Supplying the fuel to
power a greener future

Lance – A Premier Uranium Project & Location

Located in Wyoming USA, a leading US uranium extraction jurisdiction

The Lance Projects

- **Ross Production Project Area**
 - Fully licensed Uranium ISR production facility
 - Estimated Resource of 5.9 Mlbs U₃O₈
 - 4.1 Mlbs estimated to be produced
 - 2 Previously operated Mine Units (MU-1 and MU-2), with potential for an additional 2-3 Mine Units
 - MU-3 under development, monitor well installation complete
- **Kendrick Development Project Area**
 - Estimated Resource of 15.9 Mlbs U₃O₈
 - Next sequential production area
 - Amendments submitted to add Kendrick into the production licenses and permits
 - State regulators deemed application administratively complete and commenced first-round technical review
- **Barber Exploration Project Area**
 - “Under-delineated” resource area
 - Holds over 30 Mlbs of predominantly Inferred Resources
 - Potential for resource growth through exploration
 - Barber exploration/development can be achieved with organic cash funding generated by Ross and Kendrick operations

The Lance Projects

Lance Resource Estimate

“One of the largest US Uranium ISR Projects known”

- ✓ 53.7Mlbs U₃O₈ of JORC (2012) Resources¹
- ✓ Exploration Target of 104 – 163 Mlbs U₃O₈ based on a combination of past exploration results and proposed exploration programmes²
- ✓ PEN well-placed to grow Lance in size and scale

| Lance Projects Resource Estimate as at 31 Dec 2021 ¹ | | | | |
|---|------------------|-------------------------------------|--|--------------------------------------|
| Classification | Tonnes (million) | U ₃ O ₈ (Mkg) | Grade (ppm U ₃ O ₈) | U ₃ O ₈ (Mlbs) |
| Measured | 3.4 | 1.7 | 491 | 3.7 |
| Indicated | 11.1 | 5.5 | 496 | 12.1 |
| Inferred | 36.2 | 17.2 | 474 | 37.8 |
| Total | 50.7 | 24.3 | 480 | 53.7 |

1) JORC Table 1 included in an announcement to the ASX released on 14 November 2018: “Revised Lance Projects Resource Tables”. Peninsula confirms that it is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.

2) Please note that in accordance with Clause 17 of the JORC (2012) Code, the potential quantity and grade of the “Exploration Target” in this presentation must be considered conceptual in nature as there has been insufficient exploration to define a Mineral Resource and it is uncertain if further exploration will result in the determination of a Mineral Resource. Refer Appendix 2.

Timeline to Operational Restart

- The current Lance Project facilities at Ross were constructed in 2015 and operated from 2016 through mid-2019
- Current plant capacity of **0.82** Mlbs U₃O₈ per year loaded on resins, but licensed to produce up to **3.0** Mlbs U₃O₈ per year
- Production and LoM plan developed for steady-state production of **1.8** Mlbs U₃O₈ per year from Ross and Kendrick areas
- Expanded plant construction activities to commence **late 2023**, following final engineering and procurement work
- Wellfield development and construction activities to **continue** in advance of production restart
- Lance production restart in **late 2024**
- Once operational, Peninsula will be the largest scale US-based fully independent, end-to-end producer of dry yellowcake

Production Profile & Plant Flow Rate

- 2.0 Mlb p.a. production plant provides the platform for a faster ramp-up to substantial rates
- Production profile based on detailed mining, metallurgical and scheduling factors
- 2025 production level projected at ~1.1 Mlbs
- Steady state production rate of 1.8 Mlbs per annum

Ross and Kendrick Project Level CAPEX Estimate

| | US\$ M | |
|---|--------|--------|
| Remaining CAPEX to First Production (Dec'24) | | |
| Remaining Plant CAPEX | 19.3 | } 53.4 |
| Remaining General CAPEX | 5.1 | |
| Remaining Wellfield CAPEX | 25.4 | |
| CAPEX Contingency | 3.6 | |
| Ramp-up CAPEX to Positive Cash Generation (Aug'25) | | |
| General CAPEX | 0.8 | } 17.4 |
| Wellfield CAPEX | 15.9 | |
| CAPEX Contingency | 0.8 | |
| Future Wellfield Replacement & Sustaining CAPEX (Including Contingency) | 215.0 | |
| Life of Mine CAPEX (US\$ M - from July 2023) | 285.9 | |
| Life of Mine CAPEX (US\$/lb) | 19.36 | |
| <ul style="list-style-type: none"> • General CAPEX includes solids handling solution and mobile equipment to support wellfield construction & operations | | |

Lance Unit Cost Outcomes (Un-escalated)

Direct Operating Cost (“C1”)

- Direct OPEX of **\$21.69/lb U3O8** includes all project level non-CAPEX costs and contingencies from July 2023 to end of production
- Restoration and Rehabilitation costs are not included in Direct OPEX
- Royalties & local taxes are not included in Direct OPEX

All-in Sustaining Cash Cost (“AISC”)

- AISC of **\$42.46/lb U3O8**
- CY 2026 to CY 2033 best represent ongoing sustainable rates of project investment and production
 - Adopted this period to determine the All-in Sustaining Cash Cost

All-in Cost (“AIC”)

- LoM AIC of **\$50.27/lb U3O8**
- Sum of all project level OPEX and CAPEX costs
 - From July 2023 to end of mine rehabilitation

| | \$/lb U3O8 |
|---|--------------|
| Direct OPEX | 21.69 |
| Restoration & Rehabilitation | 1.80 |
| Royalties & Local Taxes | 7.42 |
| Total OPEX | 30.91 |
| Total CAPEX (see previous slide) | 19.36 |
| AIC Cost | 50.27 |

Key Financial Outcomes of AUGUST 2023 LOM PLAN

Project remains economically attractive and financial returns are consistent with 2022 DFS expectations

Key results include :

LoM Project Revenue (Real)
US\$ 988M

Payback period of 3.5 years
from August 2025

Project forecast to become cash flow positive
within first year of production (2025)

AISC (Real) of
\$42.46/lb

LoM Operating Cashflow (before tax) of
US\$ 258M

LOM AIC (Real) of
\$50.27/lb

NPV8 (Real) unlevered of
US\$ 116M

Average Sales Price (Real) Received of
US\$ 67.07/lb

IRR (Real) of
26.2%

Lower-Cost Expansion for Barber
Ross and Kendrick economics carry
complete plant cost, providing a “free
carry” for future production from 30Mlb
Barber Area resource

Sales Price Basis and Sensitivity

Peninsula's Sales Contract Book

- LoM financial model uses an average Real 2023\$ un-escalated sales price of \$55.00 per pound for ~5 MLbs of contracted sales
- Contract portfolio balances base-escalated and market pricing mechanisms
- Contracted sales represent 1/3rd of the projected LoM production from Ross and Kendrick

Uncontracted Uranium Selling Price Assumption

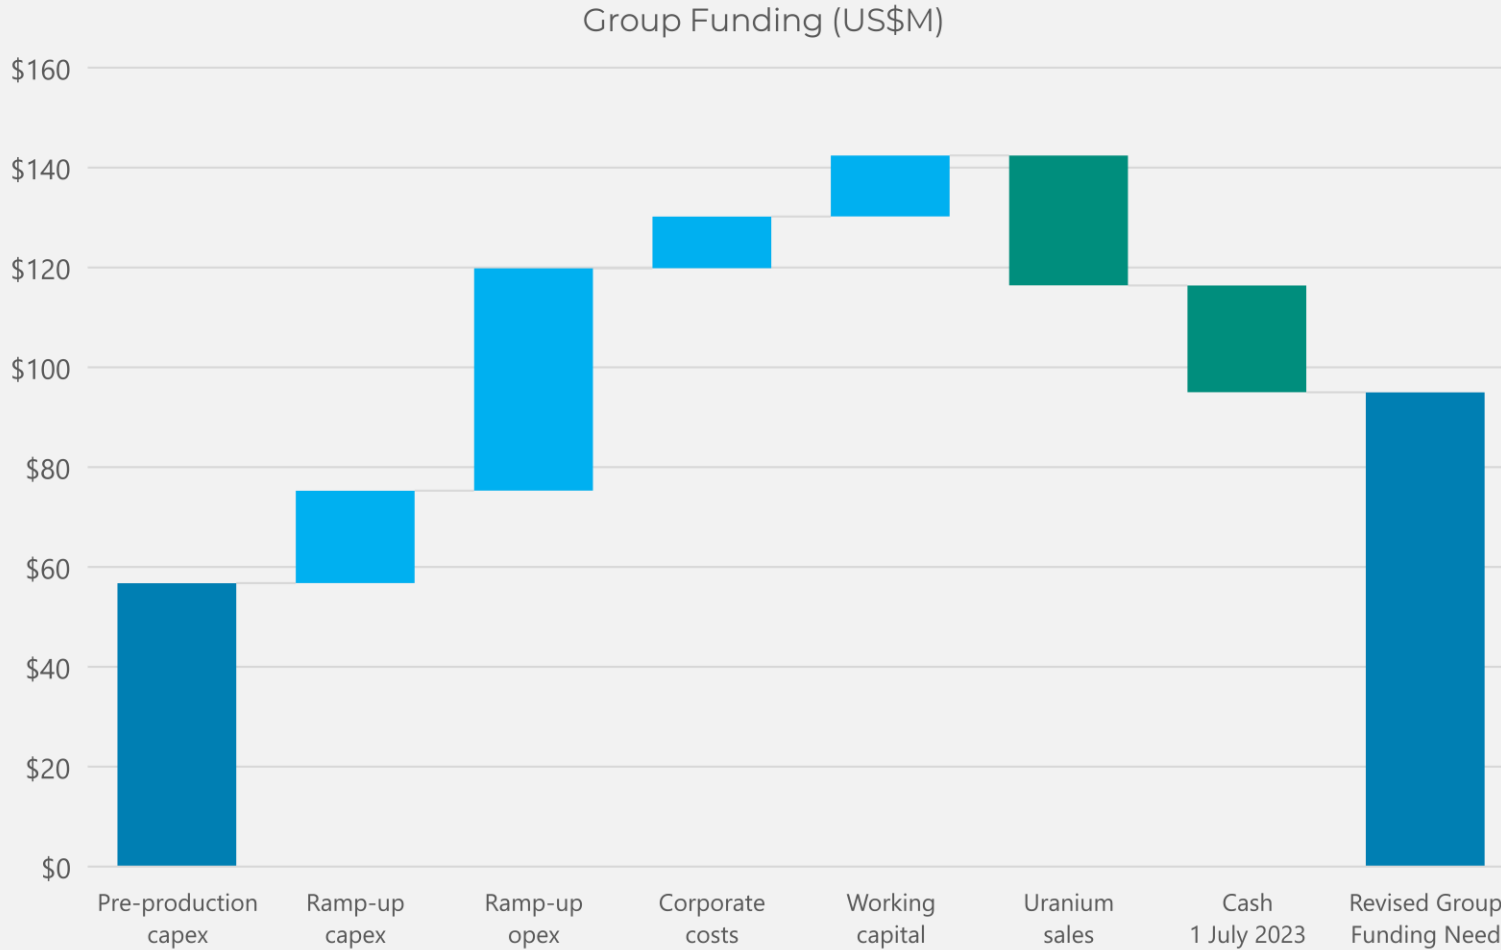

- The LoM model uses average Real 2023\$ price of \$72.62/lb for all uncontracted uranium sales

Uranium Price Sensitivity

- Each \$5/lb. increase in the price received for uranium sold that is not currently under contract increases NPV₈ by \$26 million

Group Funding Analysis

- Up to \$95 million additional funding required for PEN Group to reach sustainable positive monthly cash flows
 - Now incorporates all group costs
 - Includes discretionary cash buffer allowance of \$12.5 million
- Funding can be progressive
 - not all needed in a lump sum
- Existing cash & value of inventory provide runway

Group Funding Solution

Funding Strategy – secure the most cost competitive and value maximizing option

- PEN is assessing various funding options, including debt, equity, product prepayments and inventory sales.
- PEN'S funding objectives are to secure the most cost effective and value maximizing solution which minimizes dilution to existing shareholders.
- All funding strategies are being progressed, to align with the development plan timeline.

Funding process commenced and lender engagement underway

- BurnVoir Corporate Finance has been appointed as financial adviser to arrange the additional funding required for the expanded plant construction activities, wellfield development, commissioning and ramp-up.
- Peninsula is in discussions with Government funding agencies and is receiving interest from international banks and other financiers in relation to funding the Lance Project.
- Financiers are appreciative of the advanced stage of the Lance Project as a near term project, providing US production and direct market exposure into a growing uranium market.

Current cash balance and liquid inventory ensures development

- Cash balance of ~US\$12.5M (as at 30 Sept 2023)
- Inventory of 210,000lbs can be monetized by satisfying nearer term offtake requirements or by sales into the market.
- Additional funding to be progressively deployed to ensure development plan remains on track.

The Peninsula Advantage

- ✔ Flagship Lance Project located in a tier-one mining and uranium jurisdiction
- ✔ Lance is a long-life operation, with excellent resource and life-of-mine growth upside at Barber
- ✔ Production restart set for late 2024, positive cash flow generated within first year of operations
- ✔ Once in operation, PEN will be an independent, low-cost uranium producer of dry yellowcake
- ✔ Talented/Experienced team in place who are capable of efficiently executing the revised plan
- ✔ Focus on long-term Sustainability
- ✔ Well-positioned to supply into a growing uranium market, and to play a role in meeting aggressive decarbonization targets
- ✔ Providing US production to an undersupplied Western-oriented market

Appendix 1 – Resources

Lance Projects Resource Estimate as at 31 December 2021¹

| Classification | Tonnes (million) | U ₃ O ₈ (Mkg) | Grade (ppm U ₃ O ₈) | U ₃ O ₈ (Mlbs) |
|----------------|---------------------|--|---|---|
| Measured | 3.4 | 1.7 | 491 | 3.7 |
| Indicated | 11.1 | 5.5 | 496 | 12.1 |
| Inferred | 36.2 | 17.2 | 474 | 37.8 |
| Total | 50.7 | 24.3 | 480 | 53.7 |

¹) JORC Table 1 included in an announcement to the ASX released on 14 November 2018: “Revised Lance Projects Resource Tables”. Peninsula confirms that it is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.

Appendix 2 - Lance Exploration Target Additional Disclosure

Exploration Target¹

The Lance Projects cover a significant proportion of the Powder River Basin mobs Cretaceous sandstones of Wyoming, which are believed to represent an Exploration Target of between 104 and 163mlbs U₃O₈

Lance Projects Exploration Target (excluding the existing JORC (2012) Code Compliant Resource)

| Exploration Target | Tonnes (million) | | Grade (ppm eU ₃ O ₈) | | eU ₃ O ₈ (mlbs) | |
|--------------------|------------------|-----|---|-----|---------------------------------------|-----|
| | From | To | From | To | From | To |
| Range | 118 | 145 | 426 | 530 | 104 | 163 |
| Total | | | | | | |

Basis of Exploration Target

Exploration Target is based on a combination of Exploration Results and on proposed exploration programmes.

Exploration Results

Approximately 7,500 drillholes, of which over 2,500 have been drilled and PFN logged since 2009. The data from these holes has been used to determine a JORC (2012) Code compliant resource and to extrapolate between areas of limited drilling but still within the mineralised trends.

Proposed Exploration Programs

The Company has minerals rights to 122.2 square kilometres. This package covers the most prospective mineralised redox /roll front trends that have a cumulative strike length of over 300km. The Company intends to continue exploration over this ground with drilling in order to validate the exploration target and convert to resources.

1) Please note that in accordance with Clause 17 of the JORC (2012) Code, the potential quantity and grade of the "Exploration Target" in this presentation must be considered conceptual in nature as there has been insufficient exploration to define a Mineral Resource and it is uncertain if further exploration will result in the determination of a Mineral Resource.

Appendix 2 - Lance Exploration Target Additional Disclosure

Basis of Grade and Tonnage Range Determination

The level of exploration activity on which the Exploration Target is based is considered to be high due to the combination of a database of approximately 7,500 drillholes and several decades of geological research.

The known Lance resources are located in the upper Lance Formation and in the lower Fox Hills horizons in which roll fronts have been identified over a cumulative length of over 300kms. These horizons have only been partially explored and towards the south (Barber area) the lower unit of the Fox Hills has not been systematically tested. JORC-compliant resources have been estimated in localised areas in which reliable drilling data is available. The zones between the JORC (2012) Code compliant resource areas form the Exploration Target because of the following:

- Continuity of the prospective sandstone established by geological mapping and regional drilling
- Historic estimates of mineralisation based on drilling which has not yet been validated by Peninsula

The Exploration Target is based on a combination of:

- A tonnage calculation that incorporates the total cumulative prospective strike length of the identified redox fronts multiplied by the average width, thicknesses as determined in the resource estimate
- A grade range representing the lowest resource area grades and highest resource area grades

Proposed Exploration Activities Designed To Test Validity of the Exploration Target

Over the life of mine, ongoing exploration drilling is proposed to expand the JORC (2012) Code compliant resource within the Exploration Target areas. The initial program will be focussed on the Kendrick area. Exploration activities will mostly comprise geophysical logging of additional drillholes.
