Disclaimer & Competent Person

This presentation is provided on the basis that the Company nor its representatives make any warranty (express or implied) as to the accuracy, reliability, relevance or completeness of the material contained in the Presentation and nothing contained in the Presentation is, or may be relied upon as, a promise, representation or warranty, whether as to the past or the future. The Company hereby excludes all warranties that can be excluded by law. The Presentation contains material which is predictive in nature and may be affected by inaccurate assumptions or by known and unknown risks and uncertainties, and may differ materially from results ultimately achieved.

The Presentation contains “forward-looking statements”. All statements other than those of historical facts included in the Presentation are forward-looking statements including estimates of resources, timing of permit and license amendments, and rates of uranium extraction and recovery. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, uranium price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. The Company does not undertake any obligation to release publicly any revisions to any “forward-looking statement” to reflect events or circumstances after the date of the Presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. All persons should consider seeking appropriate professional advice in reviewing the Presentation and all other information with respect to the Company and evaluating the business, financial performance and operations of the Company. Neither the provision of the Presentation nor any information contained in the Presentation or subsequently communicated to any person in connection with the Presentation is, or should be taken as, constituting the giving of investment advice to any person.

This presentation shall not constitute an offer to sell or solicitation of an offer to buy securities of the Company, and the securities of the Company may not be offered or sold in any jurisdiction in which their offer or sale would be unlawful.

Please note that Production Targets within this presentation are based on a proportion of inferred resources. There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration work will result in the determination of indicated mineral resource or that the production target itself will be realised.

Competent Person Statement

The information in this presentation that relates to Exploration Results, Mineral Resources or Ore Reserves at the Lance Projects is based on information compiled by Mr Benjamin Schiffer. Mr Schiffer is a Registered Professional Member of the Society of Mining, Metallurgy and Exploration (Member ID #04170811). Mr Schiffer is a professional geologist employed by independent consultant WWC Engineering. Mr Schiffer has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking as a Competent Person as defined in the 2012 Edition of the ‘Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves’. Mr. Schiffer consents to the inclusion in the presentation of the matters based on his information in the form and context in which it appears.
The Feasibility Study completed for the Lance Projects includes measured and indicated resources and an assumed resource conversion of 60% (inferred to indicated or greater). The purpose of the Feasibility Study is to demonstrate the Lance Projects economic viability and the robustness of the planned low pH operations over an extended mine life beyond the existing Ross production area.

The Feasibility Study itself is based on various assumptions, including homogeneity of the delineated ore body contained within the Lance Projects. This is considered reasonable by the Company’s technical consultants, competent persons and independent external consultants. The Company believes that it has a reasonable basis upon which to prepare and release these Feasibility Study results, particularly given that the Lance Projects have been in operation since December 2015. Whilst the Company considers that all the material assumptions underpinning the Feasibility Study are based on reasonable grounds, there is no certainty that they will prove to be correct or that the outcomes indicated by the Feasibility Study will be achieved.

The Company believes it has a reasonable basis for providing the forward-looking statements and production targets included in this announcement. The material assumptions are included in Appendix 1 of this announcement and in the JORC table disclosures appended. The detailed assumptions regarding the resources are outlined in the ASX announcement released on 17 September 2018.

Investors should also note that there is no certainty that the Company will be able to raise the amount of funding for the Lance Projects when it is required or on terms that are not overly dilutive or that are favourable to the value of the Company’s existing shares.

This announcement has been prepared in accordance with the JORC Code (2012) and the ASX Listing Rules. There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration and delineation work will result in the determination of indicated mineral resources or that the production target itself will be realised. Financial information contained in this announcement is preliminary in nature and is in-part based on low-level technical and economic assessments and is insufficient to support the estimation of reserves or to provide assurance of economic development.

Under the Feasibility Study mine plan, the first 5 years production can be sourced almost entirely from Measured and Indicated Resources. If the Inferred Resources are excluded from the Feasibility Study, the economic analysis still forecasts a positive financial performance. Therefore, the Company is satisfied that the use of Inferred Resources is not a determining factor in overall Project viability and that it is reasonable to include Inferred Resources in the Feasibility Study, particularly given that the Lance Projects is an operating project that has been producing uranium for over three years.

In accordance with the relevant regulations governing the disclosure of mineral projects, readers are cautioned that mineable resources based on inferred resource material are considered too speculative geologically to enable them to be classified as reserves.
The No.1 ASX-Listed Uranium Investment Opportunity

- Only US uranium ISR mine authorised to use industry leading low pH solution
- Transition to low pH solution is low cost and underway
- Ready for rapid re-start to be first to respond to improving market
- Largest contiguous US uranium ISR mineral resource
- Only US uranium mining project with long-term sales contracts beyond 2020
- Only ASX-listed uranium company with direct exposure to US NFWG outcomes
- Significant debt reduction in progress
- Compelling valuation metrics vs US listed uranium ISR peers

Use of nuclear power continues to increase in a world that is demanding more low-carbon electric power generation

Flagship asset: Lance Projects in-situ recovery uranium mine in Wyoming, USA

Debt Reduction Terms Agreed

Debt Reduction

- Agreement reached with Lenders
- Proceeds from uranium contract monetisation, when completed, of ~US$10-11m to be applied to reduce debt

Term & Coupon

- Revised maturity date of 22 April 2021 if monetisation complete by 30 Apr 2020 (31 Oct 2020 otherwise)
- Straight term debt, bullet repayment
- Coupon reduced to 10%

Balance Sheet

- Debt balance expected to be US$6-7m after partial contract monetisation is completed
- Non-current liability on the balance sheet

De-risked balance sheet provides greater financing flexibility when funding for low pH transition & ramp-up occurs

1) Refer to ASX announcement dated 05-NOV-2019
Investment Upside – Low EV/lb vs Peers

- **30% to 65% discount to US ISR Peers**
  - Offers significant upside opportunities

**Peer group leading contract revenue base**

- Investment grade customer base
- In-the-money contracts hold realisable asset value
- Substantial leverage to uranium price recovery with only 20% of FS LOM production under contract
The Uranium Market

Substantial CAPEX to re-start idled mine capacity

- McArthur River: US$70m (2 yrs.)
- Langer Heinrich: US$80m
- Honeymoon: US$68m

CAPEX to develop new projects is not currently available or warranted

- Greenfield projects: US$100’s of million

Secondary supplies gradually reducing

- Price for uranium conversion services increasing
- Demand and price for enrichment SWU will increase as roll-out of new reactors continues
- Combination of these factors means that enricher underfeeding becomes less attractive

Government policy and action

- US Nuclear Fuel Working Group – recommendations now expected in mid November 2019
- Russian Suspension Agreement – up for renewal in CY2020
- Possible sanctions on global companies supplying goods or services to the Iranian nuclear program could disrupt the western fuel supply chain

Source: 1) World Nuclear Association; 2) respective company stock exchange filings
When will the Uranium Price Improve?

No one knows for sure, but watch for these signals:

- When regulatory certainty returns to the US
- Utilities can go to the market with confidence
- When mining companies purchase rather than produce, reducing the amount of physical uranium available for utility needs
- As utility inventories reach minimum levels
- Balances down 13% over past 2 years
- When utilities do not get material offered to them in the quantities they request

The foundation for all of these indicators is being laid right now!
Lance ISR Project | Wyoming, USA

A Premier US Uranium Project
Lance – In a Favourable Jurisdiction

- Wyoming is a leading US uranium extraction jurisdiction, hosting multiple projects; and
- Lance is one of the largest in-size and scale.
Lance – Fully Licensed and Developed

**Exceptional Asset**
- Lance holds the largest defined uranium resource of any recently producing project in the United States
- 53.6M lbs U3O8 JORC (2012) compliant resource base

**Scalable Production**
- Lance is licensed to produce up to 3M lbs U3O8 per annum
  - Would be the #1 ISR producer in the US & Top 10 globally
- Current (Stage-1) plant capacity of 1.15M lbs U3O8 per annum

**Restart Ready**
- Two fully developed Mine Units on standby and are available for further recovery operations
- Recovery operations idled in 2019 due to low level of near term production requirements

---

2 – See Appendix 2
Unlocking the Full Potential of Lance

Peninsula is leading the US industry by transitioning to low-pH ISR

- **High Potential**
  - Transform the future performance and cost profile
  - Feasibility Study released in September 2018

- **Short Timeline**
  - Two main regulatory approvals now completed
  - Plant and wellfield modifications can be implemented in minimal time following investment decision

- **Low Cost Optimisation**
  - Modest CAPEX needed for process modifications
  - Initial low pH operations to occur in existing wellfields
## Lance Low pH FS Summary

**LOM Production**
- 33.4 million lbs $U_3O_8$
- 17 year mine life

**Financial Metrics**
- LOM AISC of US$31.77/lb
- NPV8 US$157M at US$49/lb

### Three Stage Transition & Expansion Plan

<table>
<thead>
<tr>
<th>Stage</th>
<th>Year</th>

<td>$70.3M</td>
<td>$9.16</td>
<td>$30.36</td>
</tr>
</tbody>
</table>

- Each US$10/lb increase in U3O8 price assumption for uncontracted production increases NPV8 by almost US$100m

---

Note: There is a low level of geological confidence associated with inferred mineral resources and there is no certainty that further exploration and delineation work will result in the determination of indicated mineral resources or that the production target itself will be realised.
Low pH Implementation Plan

Phase 1

- Field Demonstrations of Mining and Initial Restoration
  - Complete

Phase 2

- Commercial use of low pH in MU’s 1 & 2
  - Authorised

Phase 3

- Field groundwater restoration demonstration
- Interim Restoration Report (IRR) for WDEQ approval
  - Ongoing Activity

Phase 4

- Upon approval of IRR, commercial use of low pH authorised in all future new mine units
Low pH Transition at Lance

🌿 Regulatory Benchmarks
- Completed major amendments for low pH ISR
- Progress & complete Phase 3 demonstrations during 2\textsuperscript{nd} half CY2019

🌿 Low pH Technical De-risking & Optimisation
- Conduct low pH resin optimisation test work and studies
- Evaluate design improvements for fines removal methods
- Revise the design of acid storage and distribution system

🌿 Operational Readiness at Lance
- Two fully developed wellfields with remaining recoverable resources
- Project ready for implementation funding and operational green light
Only US Uranium Mining Company with a Long-Term Contract Portfolio

- **Five sales agreements with major utilities**
  - Weighted sales price between US$51-53/lb U₃O₈
  - Contract portfolio carries through year 2030

- **Up to 6.2 million pounds U₃O₈ remaining under contract**
  - 4.2 million lbs U₃O₈ committed deliveries
  - Up to 1.9 million lbs U₃O₈ optional at customer election between 2021 & 2026

- **Material origin clauses allow purchased U₃O₈ for deliveries in CY2020**
  - Already contracted to purchase 100,000 lbs U₃O₈ for delivery in March 2020 at fixed purchase price of US$25/lb U₃O₈

- **Sales portfolio represents ~20% of projected Lance FS LOM production**
Conclusion
Take-Away Points

U.S. Domestic Producer

- Peninsula is positioned to benefit from U.S. Government initiatives and ongoing corporate activities
- The only low pH uranium ISR project in the U.S.

Long Life Project

- Lance has the largest defined ISR uranium resource in the US with clear visibility and short timeline to re-start production

Valuable Contract Book

- The only U.S. based uranium project with long-term sales contracts extending to 2030

Attractive Valuation

- Low EV/lb resource compared to peer group with substantial share price re-rating events over next 12 months
- Uranium markets are poised for a strong upward move

1) JORC Table 1 included in an announcement to the ASX released on 14 November 2018: “Revised Lance Projects Resource Tables”. Peninsula confirms that it is not aware of any new information or data that materially affects the information included in this announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.
